

John DeToledo, M.D

Why was it important for TTUHSC to have a location this far south?

0:06

This is a great location. And for the longest time, we had been looking for an opportunity to have a presence in the south part of town. And what we envision with this location is that we have this group of colleagues. So we can do for the first time a one stop shop. It's convenient. Parking is easy, traffic is easy.

What kind of specialties will be located at this clinic?

0:28

We have a strong primary care team here in family medicine and internal medicine. There is also the orthopedic surgery and sports medicine that's going to be an important part of the work we do here. In addition, we have cardiology, we have endocrinology, we have urology, we have general surgery, and we have psychiatry in this site as well. So it is really a great team of colleagues that will be providing service in this location.

What kind of specialties will be located at this clinic?

1:00

You know, for the longest time we provided best care in our main campus. And now we had the opportunity to come to the south part of town. And here we have the group of superior expert colleagues that will be working here and all of these will be done under this one umbrella here at this site. Here we have the most advanced diagnostic tests, we have infusion center, we have a pharmacy.
