

Mindfulness – Achieving Emotional Control Through Meditation

John Pelley

Basic premise for medical students

- Motivation to participate:
 - Will I be able to perform?
 - Will it make a difference?

Change Process: Social, Professional, Educational, Recreational...

- What?
- So what?
- Now what?

- This is how we can think about meditation and mindfulness

What?

- Meditation is the practice of maintaining a focus, i.e. an awareness
- Meditation is a skill that develops over time
- Like any other skill, improvement requires practice
- Not...
 - Relaxation
 - Resting
 - Aimless
 - A luxury of time

So What?

- Meditation helps you find your gift
 - “The meaning of life is to find your gift, the purpose of life is to give it away.”
Pablo Picasso
- Improves body’s response to stress
 - Reduced levels of stress hormones
 - Reduced levels of inflammatory markers
- Combats depression and anxiety
 - Improves parasympathetic tone
 - Rewires frontal connections for healthier decision making
- Addictive
 - Ruins the enjoyment of substance abuse
 - Rewards with self-awareness and self-acceptance
 - Peer led mindfulness program for medical students

Benefits Of **MEDITATION**

Reduces pain and enhances the body's immune system.

Reduces feelings of depression, anxiety, anger and confusion.

Increases blood flow and slows the heart rate.

Provides a sense of calm, peace and balance.

Helps reverse heart disease.

Helps control thoughts.

Increases energy.

Reduces stress.

“So What” Continued – Distraction and Control

- Meditation helps to control distraction
- One way to boost our will power and focus is to manage our distractions instead of letting them manage us. Daniel Goleman, *Emotional Intelligence*
- Distraction Interferes With
 - Sensitivity to others
 - Sensitivity to yourself
 - Focus
 - Performance

Automation: A Special Type of Distraction

- How does this type of distraction manage us?
- Is automation something only for machines?

Automation of thought extinguishes mindfulness

- Our brains are designed to automate everything we do
- We become unconscious
- Mindfulness extinguishes automation

Can You Make Yourself Be Mindful?

- Western thought: Make it happen
- Eastern thought: Let it happen

Let's Let It Happen – Practicing Deliberate *Distraction* (from Daniel Goleman, Emotional Intelligence)

- 15 minute exercise
- 2 minutes of instruction plus practice; 13 minutes of practice
- Eyes closed, roll shoulders forward and then back to straighten the spine
- Fill lungs from the bottom up at your own pace; empty from top down; optional – silently say “one” as you breathe out
- Relax your face; passive attitude
- Bring a distraction to mind; silently say “no” and push it away to clear your thoughts. Repeat. Try to extend the clear moment and minimize the distraction moment.

So, What Just Happened?

- What were you aware of?
- Did you sense your self?
- Do you now define relaxation and resting differently?
 - Mental disengagement vs physical disengagement

Now What?

- First, become mindful of the distractions and your ability to suspend them.
- Then, continue to become mindful of your *self in the present moment*.
- When you are ready (this could take up to a year), try to open up your awareness to the environment.

What is Water?

- Fish story, “This is Water” (YouTube, Daniel Foster Wallace, Need to do a fresh YouTube search due to copyright issues)
 - The most obvious things in our lives can go unappreciated.
 - These are things you already know, but they have lost your attention.
- Today we thought for a little while about the “water.”
